First Iguana Commuter Yacht Tender powered by 300hp diesel outboard

Cox Powertrain announces that the French amphibious boat builder, Iguana Yachts, has successfully commissioned its first Cox diesel-powered tender for the 142m superyacht, NORD.

SHOREHAM-BY-SEA, UK – 16 February 2021 - British diesel outboard specialist, Cox Powertrain, has been shipping the CXO300 300hp diesel outboard engine across the globe to its distributor network since production began in May 2020. Now, eight months on, the French amphibious boat

builder, Iguana Yachts, has successfully commissioned its first Cox diesel-powered vessel, which will be used as a tender to the 142m superyacht, NORD.

Based in Normandy, France, Iguana Yachts is globally renowned for building luxury all-terrain amphibious vessels. The craft are traditionally developed for use as luxury yacht tenders and for waterfront properties and private islands where access can be difficult due to tidal and other restrictions.

The Commuter is the most advanced model developed by Iguana. It delivers a smooth and dry experience and can be safely and easily boarded on virtually any terrain. Fitted with a single installation CXO300, the Iguana Commuter combines superior technology, economy, and ecology. This first CXO300 diesel installation by Iguana is seen as something of a milestone for the recreational marine industry and a positive move towards switching to diesel outboard technology.

This latest craft from Iguana will primarily be used as a tender to the NORD, an impressive 142m superyacht built by Lürssen and designed by Nuvolari Lenard. Having a diesel-powered tender was particularly attractive to the customer as it means they will only need to carry single fuel on the mothership, making it safer when travelling overseas and more efficient due to reduced fuel consumption and the overall cost of ownership benefits with running a diesel outboard.

Cox Powertrain's French distributor, Fenwick, who supplied the outboard to Iguana said, "This is the first time in France that a recreational boat has been fitted with a 300hp diesel outboard engine and it has been a privilege to be part of this project. Iguana Yachts are known for their avant-garde boat designs and Cox are innovators in the diesel engine market, so this pairing is great to see. It is a fantastic step forward for the marine industry, especially in France!"

About Cox Powertrain

Cox Powertrain is a leading British design and engineering innovator of diesel engines developed for marine applications globally.

Based on the South Coast of England, Cox Powertrain is backed by a solid base of private institutional investors. As a result, the company has been able to implement a long-term development programme of ground-breaking new products.

Led by ex-Cosworth CEO, Tim Routsis, whose background lies in engine development in global automotive, aerospace, and marine markets, the company's mission was to deliver a completely new concept in diesel engines that has the potential to revolutionise the marine market.

Production of Cox's first ground-breaking diesel outboard performance engine, the CXO300, began in May 2020. The high-powered 300hp diesel outboard engine is an innovative product offering a new marine propulsion option and is redefining standards within the maritime industry. Delivering

the same performance and packaging of a gasoline outboard but with the fuel efficiency and reliability of a diesel inboard, this purposefully built outboard has begun to revolutionise the market.

Cox is supported by a worldwide distributor network made up of 35 distributors covering 100 countries.
