## Kongsberg Digital adds four new partners to the Kognifai Marketplace

**The Kognifai Market Place is expanding and now includes quality applications and services from Optimarin, ChordX, Anda-Olsen and Awake.AI**

The Kognifai Marketplace is an open digital ecosystem where Kongsberg Digital's Vessel Insight customers and partners can access and integrate a broad variety of powerful applications and services from third party providers in a one-stop-shop experience for ship owners and operators, turning raw data into real value – resulting in more optimized, transparent and sustainable operations for ship owners.

As a result of high activity level towards Nor-shipping in April, Kongsberg Digital now introduces four new partners for the Kognifai Marketplace.

*“We are very pleased to add Optimarin, ChordX, Anda-Olsen and Awake.AI as partners to the Kognifai Marketplace. This is a marketplace of quality applications and services where our Vessel Insight customers can tailor solutions to their needs. Adding four more partners extends the offered solutions even further to enhance maritime operations, increase safety and reduce emissions. We experience significant interest in joining our Kognifai Marketplace and are very happy to add more applications to enhance value and possibilities for our Vessel Insight customers”, says Kim Evanger, Vice President Maritime Partnerships at Kongsberg Digital.*

**The four new partners and their applications/services in Kognifai Marketplace are:**

- **Optimarin** is a provider of ballast water treatment systems to neutralize all potentially invasive species in the water. Their software OptiLink is a tool for aiding compliant ballast operations worldwide – optimizing ballast operations to reduce port time, save fuel and time.
- **ChordX** is a maritime data analytics company providing analytics and insights in the areas of emission, fuel consumption, and machine performance in the maritime sector. Their platform is a cloud-based software visualization tool, where end-customers can access data analytics and insights on fleet’s machine performance as well as fleet’s emission and fuel performance in near real time basis.
- **Awake.AI** is an AI-driven Smart Port and Shipping Platform developed to make port operations more efficient, safe and sustainable by connecting cargo owners, ship operators and terminal operators. The company offers market leading AI based prediction and planning SaaS solutions. Smart Port as a Service™ web & mobile application is a tool for collaboration and transparency, to optimize the port bound cargo flow.
- **Anda-Olsen** is a leading supplier of certified UPS solutions for the maritime market. Their solution Anda Cloud is an IoT and sensor solution for surveillance of the UPS systems (UPS, battery banks etc), and collection of data for alarms and periodic

maintenance. It is designed to help make maintenance easier and give the user valuable information that can help prolong the lifetime of the UPS and batteries.
